SDET LEAD

# Yevhen Holiakhovskyi

Test Automati|

Building scalable test automation frameworks and embedding quality into every stage of the software lifecycle.

ABOUT

## About Me

Lead SDET with 8+ years of experience spearheading quality assurance across the full software development lifecycle. I architect automated test frameworks, lead teams of SDETs, and integrate testing deeply into CI/CD pipelines. My expertise spans Java, C#, TypeScript, and Python alongside tools like Selenium, Appium, and modern CI systems. Recently expanded into AI-augmented engineering — leveraging Claude Code and LLM tooling to accelerate test generation, code review, and developer workflows. Driven by a commitment to shipping reliable software at pace and turning quality assurance into a genuine competitive advantage.

SKILLS

## Skills

Technologies and methodologies I work with daily.

### TEST AUTOMATION

| | |
|---|---|
| Selenium | 100 |
| Playwright | 88 |
| JUnit / TestNG | 90 |
| NUnit / TUnit | 90 |
| REST Assured | 85 |
| Performance Testing | 25 |

### LANGUAGES

| | |
|---|---|
| Java | 95 |
| C# | 90 |
| TypeScript / JS | 70 |
| Python | 25 |
| SQL | 80 |

### TOOLS & PLATFORMS

| | |
|---|---|
| Git | 92 |
| Docker | 82 |
| Postman | 88 |
| Allure Report | 85 |
| Report Portal | 85 |
| Claude Code / AI | 88 |

### CI / CD

| | |
|---|---|
| Jenkins | 88 |
| TeamCity | 82 |
| GitHub Actions | 74 |
| Azure DevOps | 25 |

### METHODOLOGIES

| | |
|---|---|
| Agile / Scrum | 92 |
| Kanban | 85 |
| BDD / TDD | 88 |
| Risk-Based Testing | 85 |

EXPERIENCE

# Experience

My professional journey in test automation and quality engineering.

MAR 2024 — PRESENT Ukraine

### Software Development Engineer in Test (SDET)

Langate, Inc.

Architecting and owning a multi-layer test automation framework for an enterprise SaaS platform serving multiple large clients. Covering E2E, UI, API, visual regression, and database testing layers.

- Built a multi-project .NET automation suite (C# + TUnit) covering E2E, API, UI, component, integration, and database test layers
- Implemented Page Object Model with custom base classes, PageFactory, and domain-organized page objects across multiple portal types
- Developed a visual regression testing module using Playwright + TypeScript with screenshot and ARIA snapshot comparisons across mobile, tablet, desktop, and wide viewports
- Designed a ResourceReaper cleanup pattern with LIFO stack ordering, ensuring reliable test isolation and zero resource leaks across parallel runs
- Integrated Entity Framework Core with Azure SQL for database-driven test data setup and verification
- Configured multi-tenant test execution across multiple enterprise clients via environment-based settings, enabling full regression per tenant
- Generated strongly-typed API clients from server definitions; built an ApiService composition layer with token-based authentication helpers

C# .NET 10 Playwright TUnit TypeScript Entity Framework Core Azure SQL Testcontainers FluentAssertions Bogus / Faker

MAR 2021 — PRESENT Ukraine

### Lead Software Development Engineer in Test (SDET)

Akvelon, Inc.

Leading quality assurance for a large-scale logistics management system. Owning a multi-layer test suite covering integration, performance, UI, and hardware integration across multiple live environments.

- Designed and grew a 200+ class JUnit 5 integration test suite validating complete business workflows across multiple environments
- Built Gatling performance tests for JMS/SOAP messaging pipelines, achieving 500 msg/sec throughput, P95 latency < 50ms, and 200 concurrent users — exceeding all production targets
- Engineered ActiveMQ/JMS integration with Gatling from scratch, resolving major technical challenges including thread safety, XML serialization, and custom Gatling DSL wrappers
- Integrated ReportPortal for structured test reporting and automated build status notifications via Jenkins
- Automated multi-profile Maven builds with Jenkins pipelines supporting tag/class filtering and per-environment scheduled runs
- Covered hardware integration testing via serial communication for RFID readers and gate equipment, and UI automation with Selenide
- Mentored team members and enforced code quality standards via static analysis, AspectJ instrumentation, and shared coding patterns

Java 17 JUnit 5 Gatling Selenide ActiveMQ / JMS Apache CXF (SOAP) Retrofit ReportPortal Spring Boot Maven Jenkins

JUN 2017 — MAR 2021 Ukraine

### Software Development Engineer in Test

Akvelon, Inc.

Designed, implemented, and executed automated test frameworks and strategies, blending software development skills with testing expertise to contribute across the entire SDLC.

- Designed and developed automated test suites for functional, integration, regression, and performance testing
- Wrote clean, maintainable test code and established coding standards for the QA team
- Identified, reported, and triaged software defects through thorough root cause analysis
- Collaborated with developers and product managers to define test plans aligned with project timelines
- Documented test plans, procedures, and results — producing clear reports with actionable metrics

EDUCATION

## Education

2018

### Master's degree in System Analysis

National Aerospace University — "Kharkiv Aviation Institute" (NAU "KhAI") / 2012 – 2018

Studied system analysis, mathematical modeling, and management methodologies applied to complex engineering systems.

CONTACT

## Get In Touch

Have a project in mind or want to connect? Reach out.

I'm always open to discussing new opportunities, collaboration on test automation, or sharing knowledge about quality engineering.
